70% of all organizations have accelerated their digital transformation

Business Challenge

According to IDC, by 2022, 70% of all organizations will have accelerated use of digital technologies, transforming existing business processes to drive employee productivity, business resiliency and customer engagement. Every company is becoming a digital company.

In order to effectively compete and survive, manufacturers must digitize and evolve their operations and quality processes. This includes those unique processes that have remained manual, for whatever reason. Quality and manufacturing leaders are shifting from management of processes to a digital first management of outcomes, enabling high quality products with complex regulatory requirements to get to market faster.

CERDAAC

SIMCO

Digitally Transforming your Operations and Quality Processes

CERDAAC Custom Cloud is an intelligent, custom solution that **digitally transforms** your unique operations and quality processes, making them faster, greener and more efficient.

CERDAAC's Professional Services team will start with a detailed assessment of your current workflows vs. your desired state and industry best practices. Based on an agreed-upon Statement of Work (SOW), a robust and custom solution will be created to your specifications, including tailored views, forms, workflows, notifications, reports, and dashboards.

Some recent examples of custom operations compliance solutions include:

- Audit scheduling and management
- Validation scheduling and management
- Environmental Health & Safety (EH&S) task management
- Equipment downtime tracking
- Radiation exposure tracking
