"70% of partnerships fail to deliver their intended outcomes"

- Local Government Chronicle

Business Challenge

The world is getting smaller. For manufacturers in regulated industries, globalization has allowed companies to source best-in-class materials and subassemblies from an ever-increasing network of global suppliers. Similarly, these same regulated manufactures, now have the ability to distribute their products through global partnerships around the world.

Managing suppliers and distribution partners in regulated industries requires persistent and real-time monitoring. Issues with supply chain or distribution channels not only have a direct impact on short term availability of goods produced, but also can have long term impact on company brand and trust in market.

Partner Management Excellence

CERDAAC Partner Cloud streamlines partnership management and ensures compliance in regulated industries. Supplier and vendor qualification, onboarding, and associated actions are accessed and managed by both OEMs and their partners. This bi-directional communication enhances visibility, traceability, and transparency and provides all relevant partnership information in single, FDA compliant, online database. Reduce errors and non-conformances from suppliers and vendors by eliminating siloed data, manual processes, and out-of-date records from process workflows. Purpose-built for highly regulated manufacturers, CERDAAC Partner Cloud includes:

- Ensure partner licensing, certification, and policy acknowledgement requirements
- Manage partner audits, assessments, and inspections
- Alert notifications for renewals, non-disclosure agreements, and updated policies
- Document partner non-conformances (SCAR, first article, etc)
- Approved Vendor List qualification, onboarding, and management
- Custom scorecards to document and manage partner performance
- Deviation, change, and permit-to-work request management
- Employee, contractor, and partner-based roles for secure communication
- Automated routing and approval of partner related forms
- Comprehensive and searchable audit trails
- Robust and configurable dashboards and reporting
- Unlimited users for increased adoption and scalability

Regulated Ops Excellence

CERDAAC is a connected suite of digital solutions to ensure compliance and maximize profitability

CERDAAC

CERDAAC is a highly configurable regulated operations excellence platform that automates and coordinates calibration, maintenance, validations, and other processes to ensure compliance with greater efficiency and less downtime. Trusted by thousands of organizations worldwide, CERDAAC is purpose-built for highly regulated manufacturers who need to deliver high quality products and profits while meeting complex regulatory requirements.

- Native cloud, managed by SIMCO, powered by Google
- Enterprise grade, scalable, and extensible
- Easily tailored forms, notifications, workflows, reports
- Purpose-built for highly regulated manufacturers
- Pre-validated to comply with FDA 21 CFR part 11
- Single, unified, intelligent system of record
- Seamless integration with other systems of record
- Supported by 300+ lean operations experts

Let's talk about how CERDAAC can assist you on your operations and quality digital transformation journey
